Coursework Description

General Notes

- Use user-defined functions in your solution as appropriate.
- Use descriptive names for your variables and user-defined functions.
- Reference within your code any code adapted from external or other sources.

The University requires a program to predict progression outcomes at the end of each academic year. You should write this program in Python using the data shown in Table 1.

Table 1: Progression outcomes as defined by the University regulations.

	Volume of Credit at Each Level			Progression Outcome	
	Pass	Pass Defer Fai			
1	120	0	0	Progress	
2	100	20	0	Progress (module trailer)	
3	100	0	20	Progress (module trailer)	
4	80	40	0	Do not Progress – module retriever	
5	80	20	20	Do not Progress – module retriever	
6	80	0	40	Do not Progress – module retriever	
7	60	60	0	Do not progress – module retriever	
8	60	40	20	Do not progress – module retriever	
9	60	20	40	Do not progress – module retriever	
10	60	0	60	Do not progress – module retriever	
11	40	80	0	Do not progress – module retriever	
12	40	60	20	Do not progress – module retriever	
13	40	40	40	Do not progress – module retriever	
14	40	20	60	Do not progress – module retriever	
15	40	0	80	Exclude	
16	20	100	0	Do not progress – module retriever	
17	20	80	20	Do not progress – module retriever	
18	20	60	40	Do not progress – module retriever	
19	20	40	60	Do not progress – module retriever	
20	20	20	80	Exclude	
21	20	0	100	Exclude	
22	0	120	0	Do not progress – module retriever	
23	0	100	20	Do not progress – module retriever	
24	0	80	40	Do not progress – module retriever	
25	0	60	60	Do not progress – module retriever	
26	0	40	80	Exclude	
27	0	20	100	Exclude	
28	0	0	120	Exclude	

Part 1 - Main Version

Outcomes

1. The program should allow students to predict their progression outcome at the end of each academic year. The program should prompt for the number of credits at pass, defer and fail and then display the appropriate progression outcome for an individual student (i.e., progress, trailing, module retriever or exclude).

2. Validation

- The program should display 'Integer required' if a credit input is the wrong data type.
- The program should display 'Out of range' if credits entered are not in the range 0, 20, 40, 60, 80, 100 and 120.
- The program should display '**Total incorrect**' if the total of the pass, defer and fail credits is not 120.
- A few marks will be allocated for the efficient use of conditional statements. For example, the program does not need 28 conditional statements for 28 outcomes.
- An example of the program running with user input (shown in bold):

Please enter your credits at pass: ${\bf p}$ Integer required

```
Please enter your credits at pass: 140
Out of range.

Please enter your credits at pass: 100
Please enter your credit at defer: 40
Please enter your credit at fail: 20
Total incorrect.

Please enter your credits at pass: 100
Please enter your credit at defer: 20
Please enter your credit at fail: 0
Progress (module trailer)
```

3. Multiple Outcomes & Histogram

- The program loops to allow a staff member to predict progression outcomes for multiple students.
- The program should prompt for credits at pass, defer and fail and display the appropriate progression for each individual student until the staff member enters 'q' to quit. Optionally you can use an input of 'y' to continue.
- When 'q' is entered, the program should produce a 'histogram' where each star represents a
 student who achieved a progress outcome in the category range: progress, trailing, module
 retriever and exclude. The histogram should relate to the data input entered by the staff
 member during the program run and work for any number of outcomes.
- Display the number of students for each progression category and the total number of students.
- Example of a program run and input (in bold). Note: program should exit on 'q' to quit. 'y' to continue shown in the example is optional and depends on your program structure.

```
Staff Version with Histogram
Enter your total PASS credits: 120
Enter your total DEFER credits: 0
Enter your total FAIL credits: 0
Progress
Would you like to enter another set of data?
Enter 'y' for yes or 'q' to quit and view results: y
Enter your total PASS credits: 100
Enter your total DEFER credits: 0
Enter your total FAIL credits: 20
Progress (module trailer)
Would you like to enter another set of data?
Enter 'y' for yes or 'q' to quit and view results: y
Enter your total PASS credits: 80
Enter your total DEFER credits: 20
Enter your total FAIL credits: 20
Module retriever
Would you like to enter another set of data?
Enter 'y' for yes or 'q' to quit and view results: y
Enter your total PASS credits: 60
Enter your total DEFER credits: 0
Enter your total FAIL credits: 60
Module retriever
Would you like to enter another set of data?
Enter 'y' for yes or 'q' to quit and view results: y
```

```
Enter your total PASS credits: 40
Enter your total DEFER credits: 0
Enter your total FAIL credits: 80
Exclude

Would you like to enter another set of data?
Enter 'y' for yes or 'q' to quit and view results: q

Horizontal Histogram
Progress 1 : *
Trailer 1 : *
Retriever 2 : **
Excluded 1 : *

5 outcomes in total.
```

• Submit the completed part 1 test plan provided with your final part 1 solution.

Part 2 - Vertical Histogram (extension)

Extend your program to add a vertical histogram (stars in a category should go downwards), e.g.;

```
Progress Trailing Retriever Excluded

* * * *

*
```

- If attempted, the code for **both** staff versions (Part 1 and Part 2) must be in your program and submitted for marking.
- Submit the completed test plan provided with your final part 2 solution.

Part 3 - List/Tuple/Dictionary (extension)

Extend your solution so that the program uses Python to save the input progression data to a list, tuple or dictionary. Then access the stored data from the list, tuple, dictionary and print the data in the following format below.

Output: The following should display after the histogram(s)

```
Progress - 120, 0, 0

Progress (module trailer) - 100, 0, 20

Module retriever - 80, 20, 20

Module retriever - 60, 0, 60

Exclude - 40, 0, 80
```

Submit the completed test plan provided with your final part 3 solution.

Part 4 - Text File

For this part you could create an additional Part 4 program or extending your original version. Use python to save input progression data to a text file. Later in the program, access the stored data and print out as shown below. Example output (with data from text file):

```
Progress - 120, 0, 0
Progress (module trailer) - 100, 0, 20
Module retriever - 80, 20, 20
Module retriever - 60, 0, 60
Exclude - 40, 0, 80
```

Submit the completed test plan provided with your final part 4 solution.

References

- Reference any code taken from other sources in your program code with python program comments.
- Include the following at the top of your program(s).

I declare that my work contains no examples of misconduct, such as plagiarism, o collusion.
Any code taken from other sources is referenced within my code solution.

Coursework Demo

- You are expected to demonstrate your working solution to your tutor during a scheduled online tutorial as shown on the weekly schedule. **NOTE: If you do not attend your demo only your solutions for Part 1 will be marked.**
- Demo marks are allocated for your ability to answer questions and demonstrate understanding of your solutions.
- If you are cannot explain you code and are unable to point to a reference within your code of where this code was found (i.e., in a textbook or on the internet) then no marks will be given for the demo of that component.

APPENDIX 1 - Marking scheme

Test Plan	Criteria	Marks	Subtotal
	Part 1 – Main Version		
Tests	Outcomes:		
1 -10	 Predicts progress outcome correctly (4) with one condition statement (1) 	5	
	 Predicts module trailer outcome correctly (4) with one condition statement (1) 	5	/25
	 Predicts module retriever outcome correctly (4) with one condition statement (1) 	5	,
	 Predicts exclude outcome correctly (4) with one condition statement (1) 	5	
	Submitted Test Plan PASS/FAIL correct at demo. Zero if test plan results incorrect or FAIL shown for all tests 1-10.	5	
Tests	Validation:		
11-13	Identifies input that is wrong data type	3	/4.0
	• Credits outside range, 20, 40, 60, 80, 100, 120	3	/12
	• Identifies credit total not 120	3	
	Submitted Test Plan PASS/FAIL correct at demo. Zero if test plan results incorrect or FAIL shown for all test 11-13.	3	(37)
Tests		3	(37)
14-15	Loops:Predicts progression outcomes for multiple students	8	
14-13	 User enters 'q' to quit 	2	/12
	Submitted Test Plan PASS/FAIL correct at demo. Zero if test plan		/12
	results incorrect or FAIL shown for tests 14-15.	2	(49)
Tests	Histogram:		(- /
16	'Histogram' outcomes correct	4	/7
	Category and overall totals correct	2	•
	Submitted Test Plan PASS/FAIL correct at demo. Zero if test		
	plan results incorrect or FAIL shown for test 16.	1	(56)
Test	Part 2 - Vertical histogram:	5	/6
17	Submitted Test Plan PASS & correct at demo	1	(62)
Test	Part 3:		
18	Data stored in list, tuple or dictionary	4	/10
	Data from list, tuple or dictionary is displayed	4	
	Submitted Test Plan PASS & correct at demo	2	(7 2)
Test	Part 4: Text File		/10
19	Input data saved to text file	4	
	Stored data is accessed and displayed correctly Stored Data Base Store and the store and the store access to the store and the store access to the store access	4	(03)
	Submitted Test Plan PASS & correct at demo	2	(82)
	User-Defined Functions	5	(87)
	Programming style - descriptive variable/function names	3	(90)
	Demo in scheduled computer seminar (Week 10 or 12)	10	
	Totals		/100
